Hat JoyC

SKU:U079

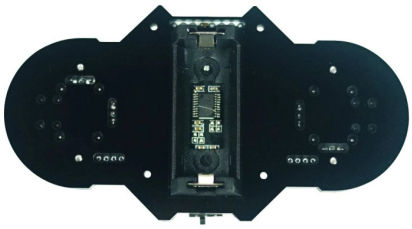

Description

Hat JoyC is a joystick module designed specifically for the M5StickC, allowing for dual-hand operation. It features an embedded STM32F030F4 main control chip and uses the I2C communication protocol to transmit data with the host M5StickC. The joystick range is 0 ~ 200, with 12 RGB LEDs located below each of the left and right joysticks. The base of the joystick is equipped with a 16340/18350 battery holder, providing long-lasting power. This joystick supports full-range angle deviation and center pressing, outputting angle deviation data and digital switch signals.

Features

- Embedded STM32F030F4
- Communication Protocol: I2C (Address: 0x38)
- Supports full-range deviation/center button

Includes

- 1 x Hat JoyC
- 1 x 16340/18350 Battery (700mAh)

Applications

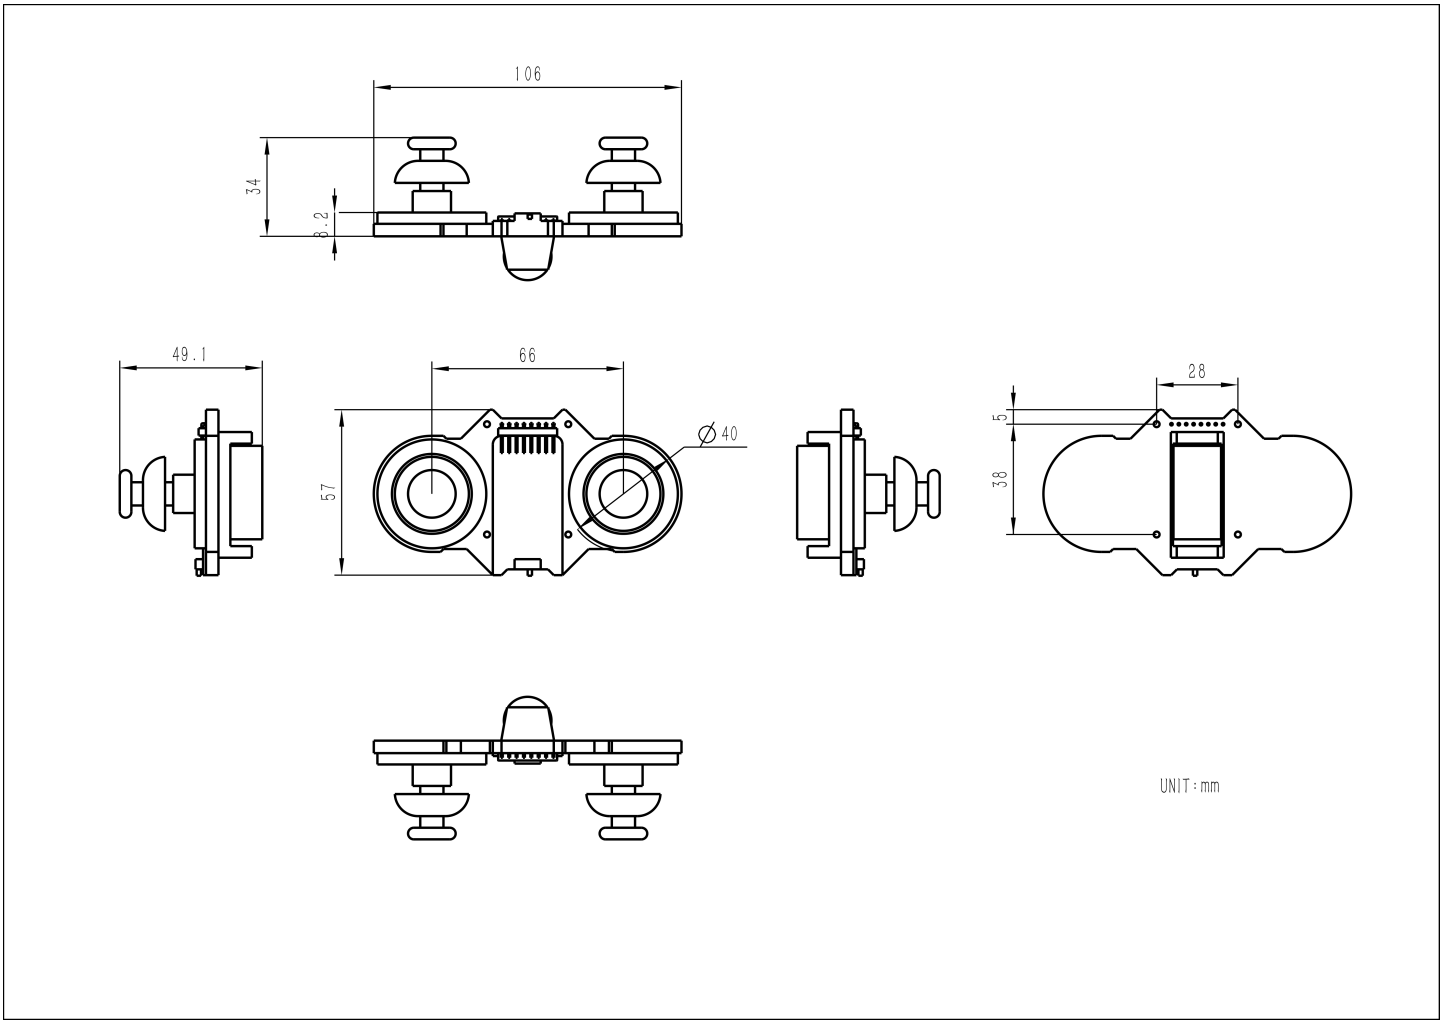

- Game Controller
- Wireless Joystick Device

Specifications

Specification	Parameter
MCU	STM32F030F4P6
Communication Port	I2C @0x38
Product Size	100.0 x 55.0 x 50.0mm
Product Weight	81.0g
Package Size	119.0 x 89.0 x 65.0mm
Gross Weight	117.0g

Model Size
