Hat 18650C

SKU:U080

Description

Hat 18650C is a rechargeable battery base designed specifically for the M5StickC, featuring a built-in 18650 high-capacity rechargeable lithium battery that can provide extended battery life for the device. The base uses the plug-in structure design of the HAT series, ensuring a reliable connection with the M5StickC during use. The bottom is equipped with a USB charging port, allowing for convenient and quick charging of the battery. The USB port on the base is only used for charging and does not support serial communication. The back of the base offers various types of mounting holes, making it easy for users to install it on various surfaces. The battery capacity is 2200mAh.

Features

- Rechargeable design
- Replaceable battery
- 2200mAh rechargeable battery

Net Weight	90.0g
Package Size	173.0 x 25.0 x 25.0mm
Gross Weight	94.0g

Learn

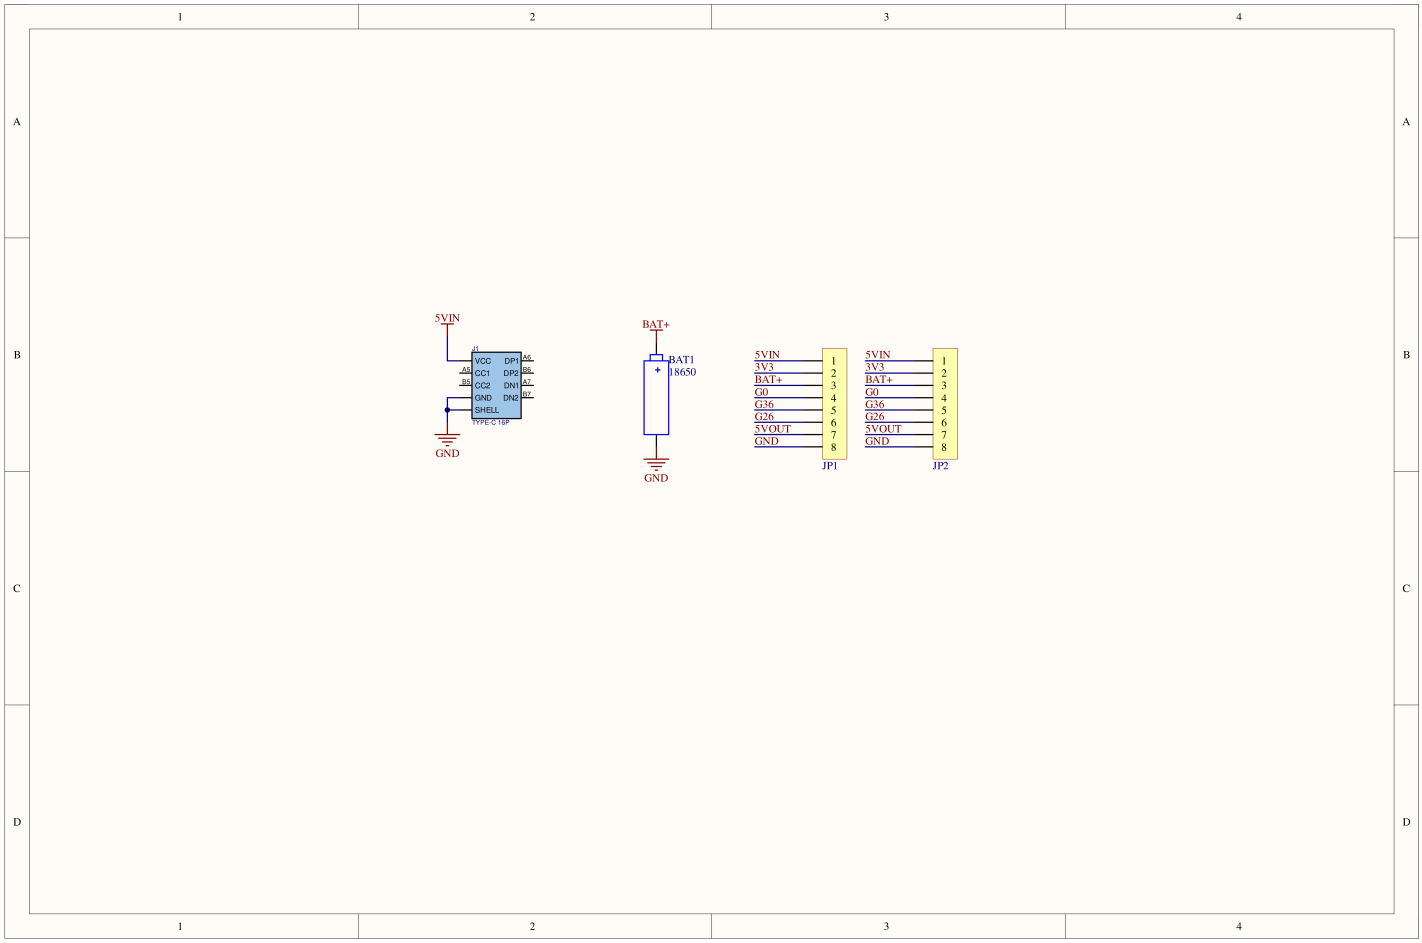

Mounting Hole Design

M5StickCs produced after October 2019 have an added mounting hole design on the back. If your M5StickC is an older model (without mounting holes), you cannot use screws to secure it to the 18650C HAT, but this does not affect the functionality of the module.
