Unit DMX

SKU:U183

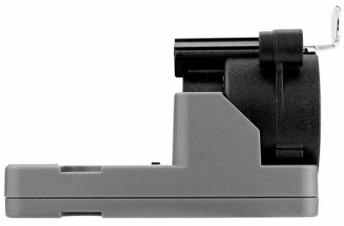

Description

Unit DMX is a communication unit specifically designed for DMX-512 data transmission scenarios. It integrates the CA-IS3092W isolated half-duplex RS-485 transceiver, providing up to 5kVrms electrical isolation protection. The onboard 120Ω terminal resistor switch can be connected according to the usage scenario to match the characteristic impedance of the signal transmission line, preventing signal reflection and distortion. Through the Grove interface, this unit can communicate with the M5 host via serial communication. The device is equipped with an XLR-3 female interface, making it convenient for users to connect DMX devices. This product is suitable for stage lighting control, landscape lighting control, dimmer control, and other scenarios.

Features

- Isolated RS-485 transceiver CA-IS3092W
- Grove interface for serial communication
- Equipped with XLR-3 female interface
- 120Ω terminal resistor matching

Includes

- 1 x Unit DMX
- 1 x HY2.0-4P Grove cable (20cm)

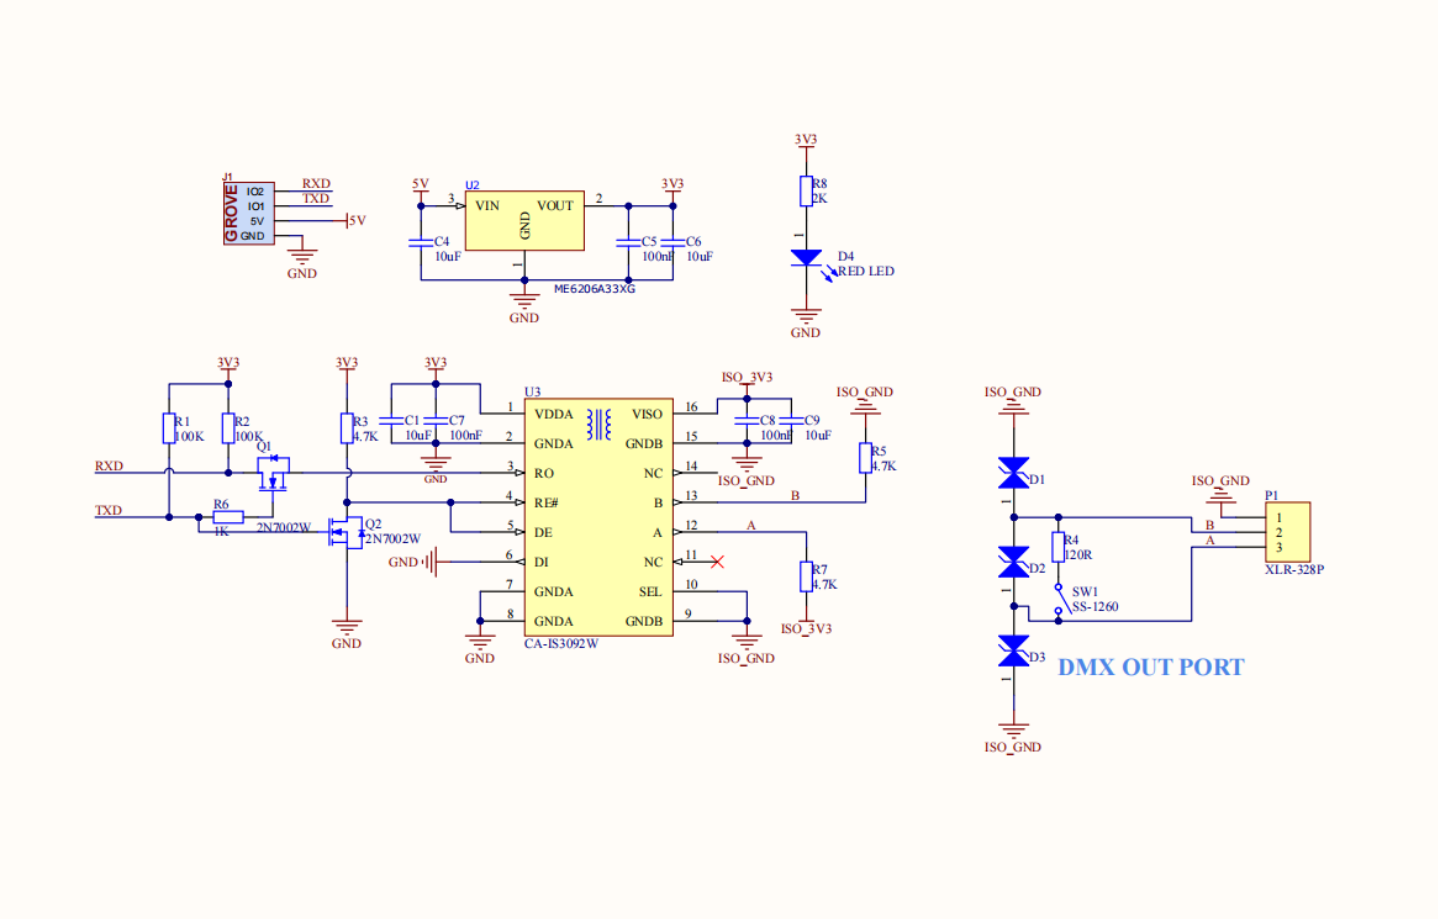

Applications

- Stage lighting control
- Landscape lighting control
- Color light control

Specifications

Specification	Parameter
Communication Protocol	DMX512
Isolated Transceiver	CA-IS3092W
Isolation Voltage	5kVrms
Data Transfer Rate	Up to 500Kbps (DMX protocol fixed rate: 250 Kbps)
Communication Protocol	RS-485, half-duplex
Grove Interface	For RS-485 communication and control, serial communication
Terminal Resistor	120Ω, configured at both ends of the RS-485 bus to prevent signal reflection
DMX Interface	XLR-3 female
Operating Temperature	0 ~ 40°C
Product Size	51.6 x 24.0 x 32.0mm
Product Weight	14.5g
Package Size	138.0 x 93.0 x 33.0mm
Gross Weight	20.0g
