Atom Mate

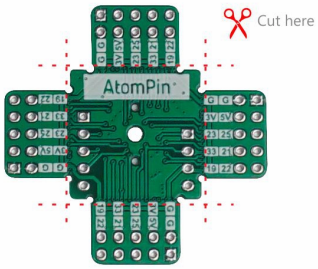

SKU:A086

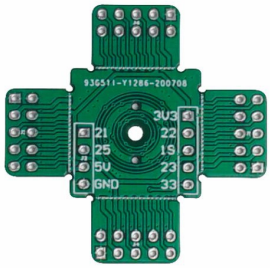

Description

Atom Mate is a DIY expansion kit specifically designed for the ATOM series. The kit includes three types of accessories. AtomPin is a pin breakout board that extends the pins from the bottom of the Atom. With a specially designed bracket, it allows easy mounting of the Atom without interfering with the pin usage. The perforated design around the edges allows users to break off sections as needed, making it easier to build circuits on a breadboard. AtomHat is an adapter board for M5StickC Hat series products. If you already own HAT accessories,

you can directly use them with AtomHat, increasing product reusability. The cross-shaped holes at the bottom can be connected to building blocks, making it very convenient to secure. AtomMount is a building block accessory specifically designed for fixing the Atom. It only requires one screw to connect with the Atom and can be combined with other building blocks, injecting vitality into your creations.

Features

- Compatible with Atom-Matrix/Atom-Lite
- Multiple DIY methods
- Flexible installation

Includes

- 1 x AtomPin bracket
- 1 x AtomPin blank board
- 1 x AtomHat
- 1 x AtomMount
- 5 x 2.54-5P pin headers
- 1 x 2.54-4P pin header
- 1 x Hex key
- 1 x M2*6 cup head machine screw
- 1 x M2*8 cup head machine screw

Applications

- Experimental circuit breadboard setup
- Use with building blocks
- HAT adapter

Specifications

Specification	Details
Material	Plastic (PC)
Dimensions	AtomHAT: 24 x 24 x 8mm, AtomMount: 24 x 24 x 8mm, AtomPin: 24 x 38 x 8mm
Weight	11g
Package Size	138.0 x 93.0 x 17.0mm
Gross Weight	22g

IO Notes

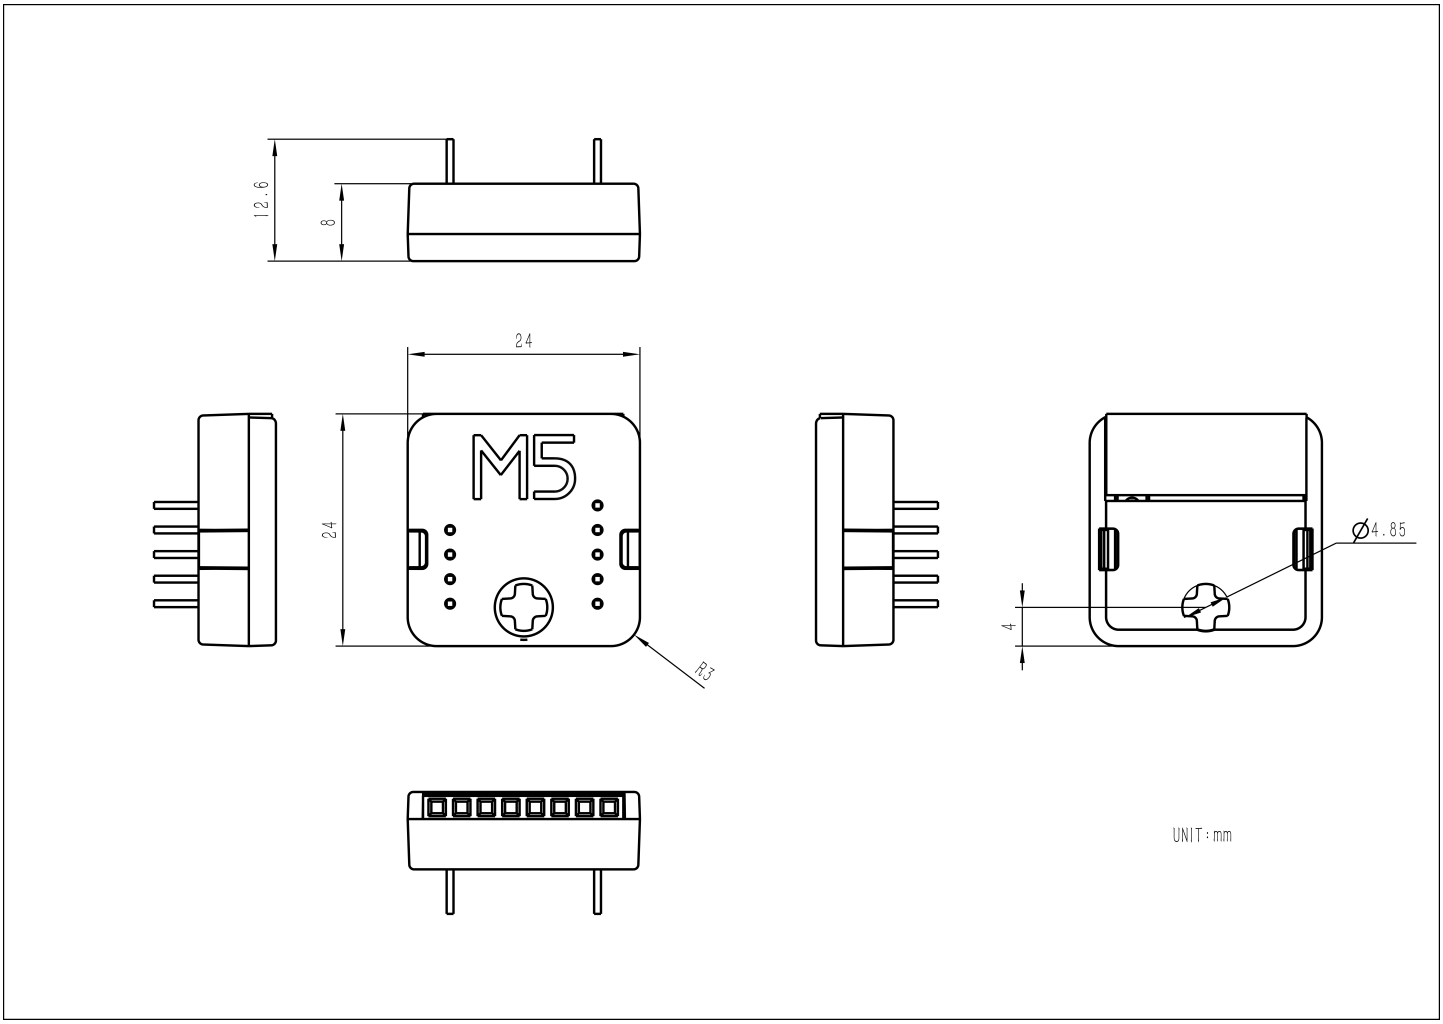

Before using AtomHat, check the HAT pin numbers. You may need to modify the corresponding pin numbers in your program. When using the PIR HAT, set pin 33 to internal pull-up.
