Module Battery

SKU:M002

Description

Module Battery is a lithium battery expansion module in the M5Stack stackable module series. With a battery capacity of 750 mAh, it can provide your M5 device with extended battery life. When you want to create a portable product with long standby time, the built-in battery capacity of the M5GO base or Basic base may not be sufficient. In this case, you can choose to use the Module Battery lithium battery expansion module to extend the battery life of your M5 device. The lithium batteries are parallel-connectable, meaning you can stack multiple battery modules to maximize the device's battery life.

Note

Lithium Battery Precautions

The safety of lithium batteries is influenced by many factors. Overcharging, over-discharging, overheating, short circuits, compression, and penetration can all lead to catastrophic failures, battery pouch rupture, electrolyte leakage, and even fire. Although all the battery modules we provide come with protection circuits, you still need to handle them with care during actual use.

Features

- 750mAh high-capacity battery

Includes

- 1 x Module Battery

Specifications

Specification	Parameters
Net Weight	24g
Gross Weight	36g
Product Size	54 x 54 x 14mm
Package Size	132.0 x 95.0 x 15.0mm
